

BEAMA 2050 Connected's Climate Commitment: Driving a Unified and Effective Path to Decarbonisation

Sustainability must be at the core of manufacturing, energy and built environment growth. BEAMA 2050 Connected fosters coordinated action across the entire value chain, helping businesses achieve decarbonisation and greater sustainability through collaboration, informed decision-making, and leadership.

"Many BEAMA 2050 Connected companies already have ambitious sustainability targets. This commitment strengthens those efforts by promoting a unified approach to decarbonisation and circularity – integrating sustainable operations, product development, and industry learning. By mobilising practical, scalable action across the value chain, we aim to drive meaningful change for a more sustainable UK manufacturing, built environment and energy sectors.

"This commitment will support the creation of low carbon jobs, develop vital business skills, and accelerate the UK's carbon reduction targets through a joined-up value chain approach. It will attract investment into low-carbon industries and reinforce the UK's leadership in sustainable solutions.

"Achieving Net Zero and a circular economy is a shared responsibility – either we succeed together, or we don't succeed at all. Through this commitment, we pledge to support each other and our value chains in delivering real and lasting climate action."

Yselkla Farmer
CEO
BEAMA

2050 Connected
**Climate
Commitment**

By signing this
commitment,
companies pledge to:

- ❖ **Reduce Scope 1, 2, and 3 emissions** to support value chain decarbonisation and the transition to Net Zero by 2050 at the latest.
- ❖ **Embed sustainability in corporate governance**, making it central to business strategy and decision-making.
- ❖ **Set science-based targets aligned with a 1.5°C future** using rigorous methodologies.
- ❖ **By 2050, integrate circularity principles across relevant design and procurement decisions**, advancing the circular economy through supporting responsible use of materials.
- ❖ **Engage in responsible policy and regulatory development individually and via BEAMA**, advocating for policies that enable sustainable business and product decarbonisation.
- ❖ **Collaborate within BEAMA 2050 Connected** to ensure an ambitious, aligned approach to value chain decarbonisation and circularity, fostering continuous learning and best practice sharing.
